EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the Specification,

Page 7, line 11: Delete "this make it" and substitute therefor
- - make this - -.

In the Abstract,

Delete the Abstract and substitute therefor the following:

- - A venting device, particularly for fluid storing reservoirs such as tanks, comprising a connecting part for establishing an air-conducting and/or fluid-conducting connection to the inside of the reservoir and comprising a closing part, which can be removed from the connecting part and which is provided, in particular, in the form of a closure cap. When the closure cap is fastened, at least one leakage point in the form of an air exchange opening exists between the closure cap and the connecting part. By virtue of the fact that a labyrinth-like seal effectively seals the respective leakage point at least from penetrants such as water and/or cleaning chemicals while not impairing an air exchange for the actual venting, the system of seal passages inside the labyrinth seal prevents the

unwanted damage causing entry of the respective penetrant, also in the form of dirt or dust, into the reservoir or tank interior. - -

In Claim 1 (Patent claim 1),

Line 1: Delete "such as tanks";

Line 14: Delete "and the latter is present in a large number" and substitute therefor - - in a definable plurality - -; and

Line 15: Change "(26)" to - - (24, 26) - -.

The following is an examiner's statement of reasons for allowance: None of the art of record, alone or in combination, teaches a venting device for fluid storing reservoirs having for effective sealing in the intended flow direction of a penetrating medium downstream of a U-shaped seal passage an angular seal passage formed from the collecting and delivery site which is routed along a radial circumference of a connecting part and into which guide channels discharge which extend transversely to it and which with their other free end are each connected to the U-shaped seal passage and to the interior of the venting device in a manner so as to be able to carry the media, as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
